

SM435B Real-Time Spectrum Analyzer & Monitoring Receiver

100 kHz to 43.5 GHz

with 2-seconds of 160 MHz BW Block Transfer Buffer 28 April 2022

The SM435B is a high-performance spectrum analyzer and monitoring receiver. Tuning from 100 kHz to 43.5GHz, the analyzer has 160 MHz of instantaneous bandwidth (IBW), 110 dB of dynamic range, 1THz/sec sweep speed at 30kHz RBW (using Nuttall windowing), and ultra-low phase noise to rival even the most expensive spectrum analyzers on the market.

Signal processing is distributed between a very powerful Intel FPGA and an external PC having an Intel Core i7 processor. The Signal Hound SM435B can be readily interfaced, using its local API, to an automated monitoring system or to automated test equipment. The SM435B API provides customers the access needed to insert their own DSP algorithms into a calibrated stream of I/Q data.
